

◆ Course Information

- This course introduces participants to the core principles of Lean Manufacturing and how they apply to day-to-day factory operations. Participants will learn how to identify waste, understand flow, improve workplace stability and use simple Lean tools to support safety, quality, delivery and productivity improvement.

◆ Course Objectives

- Upon completion of this program, participants will be able to:
- Understand Lean thinking and the purpose of waste elimination
- Identify the 8 wastes in manufacturing processes
- Understand flow, pull, takt time and basic value stream thinking
- Apply practical Lean tools such as 5S, visual management, standard work and problem solving
- Develop simple improvement ideas for productivity, quality and delivery performance

◆ Who Should Attend

This course is designed for Managers, Team Leaders, Executives, Engineers, Supervisors and operational teams involved in production improvement and waste reduction.

Included but not limited to: Production, Engineering, Process Engineering, Planning, Maintenance, Quality Assurance/Quality Control, Warehouse, Materials, Facilities, Process Improvement, Continuous Improvement and Lean Operations teams.

◆ Methodology

Variety of training techniques and methods: including actual customized case study for real-life application
Lively two-way interaction training facilitation.

Role play to give feedback to subordinates and group presentation to dive deeper understanding of the techniques and application in the real world.

◆ Course Schedule

8:30	Registration	14:00	Training Resumes
9:00	Training Begins	15:30	Afternoon Break
10:30	Break	15:45	Training Resumes
10:50	Training Resumes	17:00	Training Concludes
12:50	Lunch		

Applicable for both days

Course Content

Day 1

Module 1:Lean Manufacturing OverviewWhat Lean means in factory operationsCustomer value and wasteLean culture and role of leadersModule 2:Understanding the 8 WastesDefects, overproduction and waitingNon-utilized talent and transportationInventory, motion and extra processingWaste walk examplesModule 3:Flow and Workplace StabilityProcess flow and bottlenecksTakt time and basic capacity view5S, visual management and standard workModule 4:Practical Lean ToolsKaizen and small improvementBasic problem solving using PDCAQuick improvement activity

Day 2

Module 5:Value Stream and Flow ImprovementCurrent vs future state thinkingBottleneck and waiting analysisLayout, material movement and line balancing basicsModule 6:Pull, Kanban and Inventory ControlPush vs pull systemKanban concept and replenishment signalsReducing WIP and hidden inventoryModule 7:Lean Problem SolvingPDCA and A3 thinkingRoot cause analysis overviewMeasuring improvement resultsModule 8:Group WorkshopWaste walk case studyBuild a Lean improvement planPresentation, recap, questions and feedback
